Core Strengths:

Backend & API architecture (Django, DRF, FastAPI)

Secure, scalable systems for regulated domains

Cloud delivery & DevOps (AWS, Docker, Kubernetes, CI/CD)

Strong SDLC ownership and client-ready execution

Technical Skills:

Python, Django, Django REST Framework, Flask, FastAPIDatabases: PostgreSQL, MySQL, SQLite, CouchDBCloud & DevOps: AWS, Docker, Kubernetes (EKS), Jenkins, GitHub ActionsWeb & Collaboration: REST APIs, Auth, ORM, Angular, BootstrapMonitoring & Tools: CloudWatch, Kibana, Sentry, Git, Jira, Confluence, Swagger

Deloitte.

Shaik Saleem

Deloitte LLP

Profile

Red Hat Certified Engineer with 5.5+ years of experience managing enterprise Linux environments across production and development infrastructures. Skilled in Linux administration, VMware virtualization, and infrastructure automation using Ansible, Bash, and Python.

Professional Experience:

Senior Software Developer — Assured Health Technologies (2024 – Present)Builds and maintains scalable backend services for multi-state healthcare licensing, renewals, and compliance platforms. Develops secure APIs and real-time dashboards for enrolment tracking, follow-ups, and expiration timelines. Deploys containerized applications on AWS EKS, ensuring high availability, audit readiness, and data security.

Backend Developer — Bajaj Finserv (Bajaj Market) (2021 – 2024)Designed and implemented RESTful APIs for asset management and mutual fund platforms. Enabled buying/selling, portfolio management, mandates, KYC modifications, and third-party integrations (BSE, KFin). Delivered secure, high-performance financial systems supporting large user bases.

Backend Developer — Phynart Technology (2020 – 2021)Built backend services for a Smart Home IoT platform supporting remote device control, automation rules, scheduling, energy monitoring, and sensor-based workflows. Contributed to AWS IoT and Greengrass solutions for real-time device communication and scalability.Earlier Experience — IT Cube Pvt. Ltd. & Redbytes SoftwareBackend-focused full stack development for medical data automation (Recsum) and e-commerce platforms (carX), strengthening API design, automation, and end-to-end delivery skills.

Cloud Engineering Experience

Improved platform reliability and uptime by designing and operating highly available cloud architectures on AWS using containerization (Docker) and orchestration (Kubernetes), supporting mission-critical workloads in regulated domains.

Accelerated release cycles and reduced deployment risk through implementation of CI/CD pipelines (Jenkins, GitHub Actions), enabling automated build, test, and deployment workflows with consistent, repeatable releases.

Enhanced security and compliance posture by implementing cloud-native security best practices, access controls, and monitoring for systems handling sensitive financial and healthcare data.

Optimized infrastructure scalability and performance by leveraging cloud services, containerized workloads, and proactive monitoring (CloudWatch, Kibana, Sentry), ensuring systems scale reliably under peak load.

Reduced operational overhead for client teams by automating infrastructure provisioning, deployments, and routine operational tasks, allowing product and business teams to focus on core outcomes.

Improved cross-team delivery and client confidence through close collaboration with product, backend, frontend, and operations stakeholders—translating business requirements into stable, production-ready cloud solutions.
